SUMMARY

Data and BI Analyst with 5 years of experience and a Master's in Information Systems. I build automated pipelines, KPI dashboards, and turn complex data into business recommendations using SQL, Python, Tableau, Power BI, Snowflake, and AWS. Currently applying AI-assisted workflows and LLM tools to accelerate analysis and reporting.

TECHNICAL SKILLS

- **Languages & Databases:** Python, SQL, R, SAS; PostgreSQL, MySQL, SQL Server, Snowflake, BigQuery, Oracle,
- **Engineering & Cloud:** ETL/ELT, dbt, SSIS, PySpark, Databricks, AWS (S3, Athena, Redshift), Azure, Airflow, Kafka, Git
- **Visualization & BI:** Tableau, Power BI (DAX, Power Query), Looker, Excel (VBA, Pivot Tables), QuickSight, Alteryx,
- **Methods:** A/B Testing, Regression, Forecasting, Predictive Modeling, Machine Learning, Causal Inference, Segmentation, Data Modeling, Data Warehousing, Data Governance, Stakeholder Management
- **Business:** Requirements Gathering, KPI Development, Data Storytelling, Process Documentation, Agile (JIRA)
- **AI & Automation:** Prompt Engineering, LLM-Assisted Workflows (Claude API, Claude Code), AI-Assisted Analytics, Agentic Workflows

WORK EXPERIENCE

Data Analyst, *Unum Group*, Richardson, TX (Remote) **Jun 2024 - Present**

- Designed a KPI framework evaluating 30+ rules across 20+ data sources, automating Power BI scorecards that drove rule retention decisions, reducing complaints by 22% and false positives by 18%.
- Automated the Monthly Business Review by building SQL pipelines (CTEs, window functions) and Power BI dashboards, cutting reporting turnaround from 10 days to 48 hours for leadership.
- Migrated 15+ legacy Excel and SSRS reports to a centralized Power BI reporting suite, standardizing data models across source systems and improving data freshness from weekly to daily.
- Built an operations dashboard tracking processing SLAs and team workloads across 200+ users, helping leadership spot bottlenecks and cut average cycle time by 18%.
- Partnered with Operations, Risk, and CX teams to define KPI logic and data ownership standards, building a shared reporting layer that five business units now use for monthly reviews.
- Contributed to Unum's AI analytics initiative as a domain expert, defining 15+ business rules and validating outputs against historical data for an anomaly detection model now in production.
- Found a gap in legacy suppression logic quietly filtering out ~$95K/month in valid claims; traced the root cause, built the case, and shipped the fix to production.

Data Analyst, *Hexaware Technology*, Hyderabad, India **Jun 2018 - Jul 2022**

- Analyzed 3M+ retail and e-commerce transactions in SQL and Python to map customer journeys and funnel dropoffs; findings drove a UX overhaul that lifted conversion by 12%.
- Built segmentation and churn models across 500K customer profiles that marketing used to target high-risk users, lifting repeat purchases by 10% and reducing churn by 8%.
- Designed and ran A/B tests on promotions, pricing, and checkout flows using t-tests and chi-squared analysis; top-performing experiments improved campaign ROI by 15%.
- Owned 50+ KPI dashboards in Tableau and Power BI for marketing, ops, and vendor teams; trained 10+ stakeholders on self-service views, cutting ad-hoc requests by over 60%.
- Partnered with marketing and product to translate funnel metrics and price elasticity into pricing tier changes and targeted offers, driving an 8% lift in average order value.
- Designed ETL/ELT pipelines on Snowflake processing 10TB+ of structured and unstructured data across 5 teams, improving reporting accuracy by 35% and cutting retrieval time by 40%.

EDUCATION

University of North Texas Denton, Texas

Master of Science, Information Systems and Technologies

Jawaharlal Nehru Technological University Hyderabad, India

Bachelor of Science, Electronics and Communication Engineering

PROJECTS

E-Commerce Analytics Pipeline (dbt + DuckDB): Built 11 dbt models with 17 automated quality tests across staging/mart layers over 100K+ orders.

Healthcare No-Show A/B Test (Python, SciPy): Statistically significant (p=0.04) SMS experiment projecting $61K annual recovery at $211 cost.
